PREREQUISITES

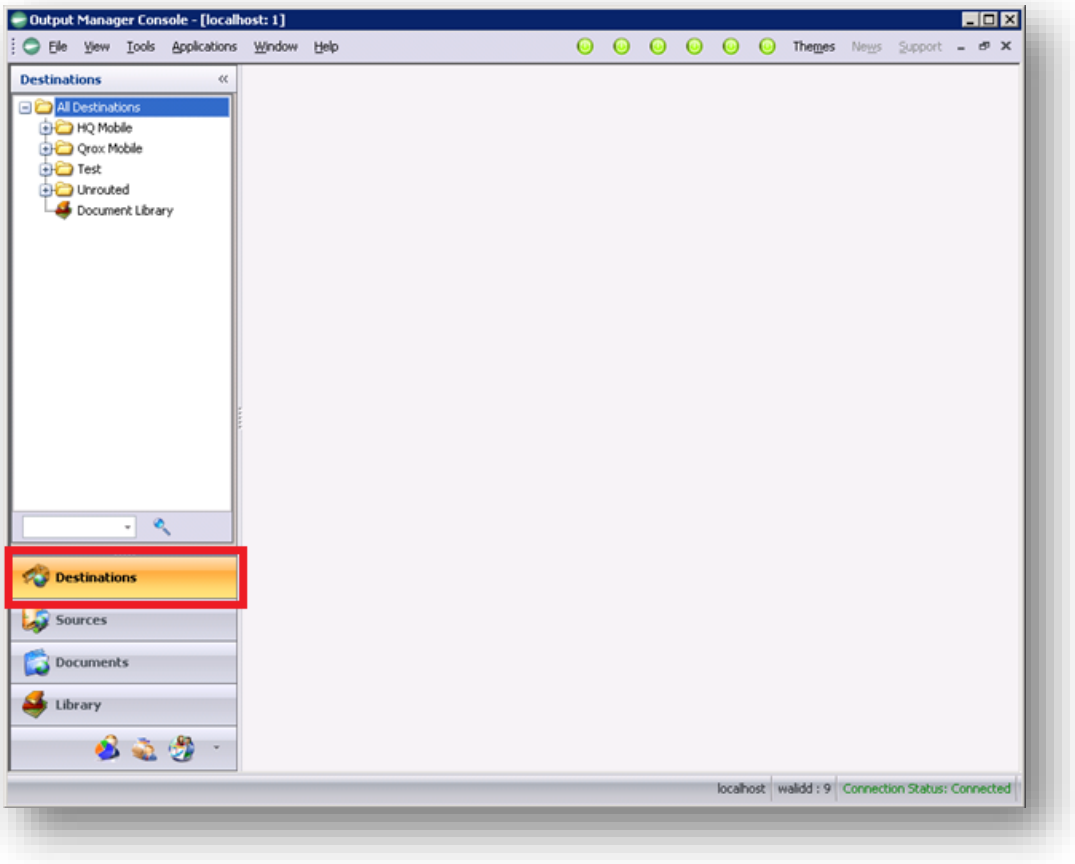
Prior to completing the configuration steps:

- Ensure Output Manager 3.2 is installed and properly licensed
- Ensure that the Mobility Add-On is added and licensed in Output Manager
- Ensure Mobile Server 6.2 is installed and properly licensed

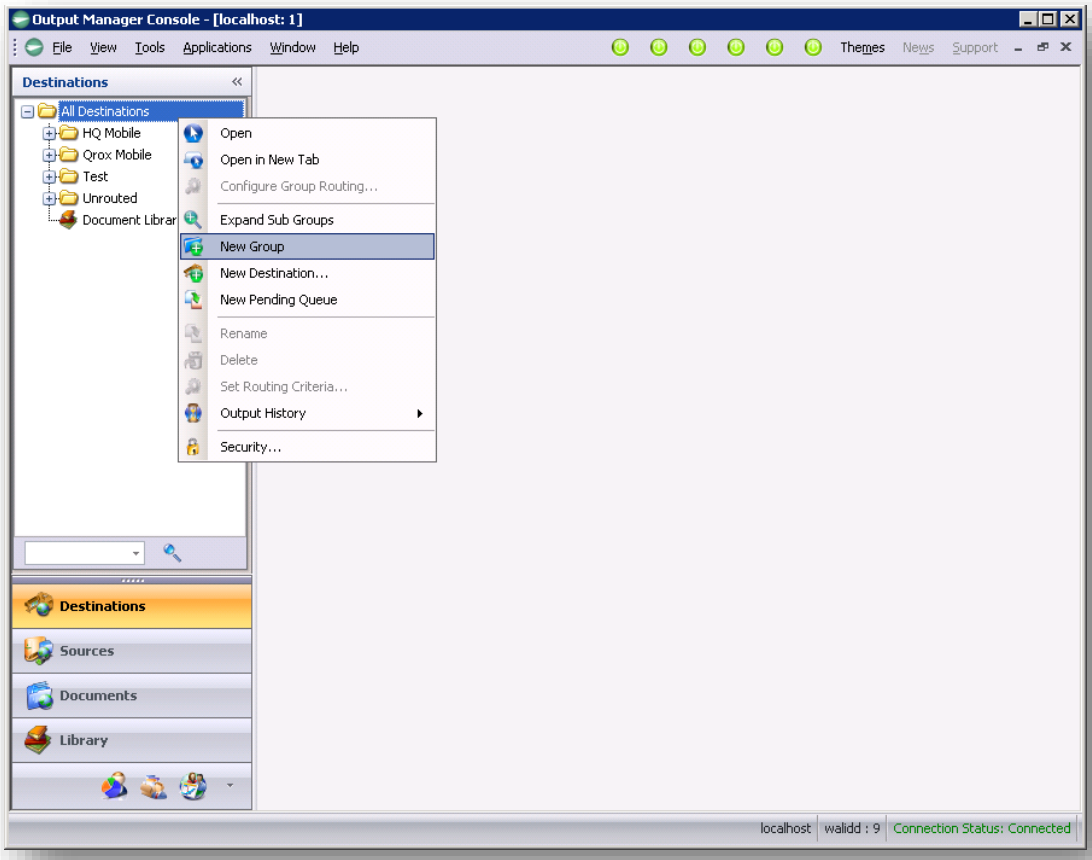
CONFIGURATION

To begin, open Output Manager.

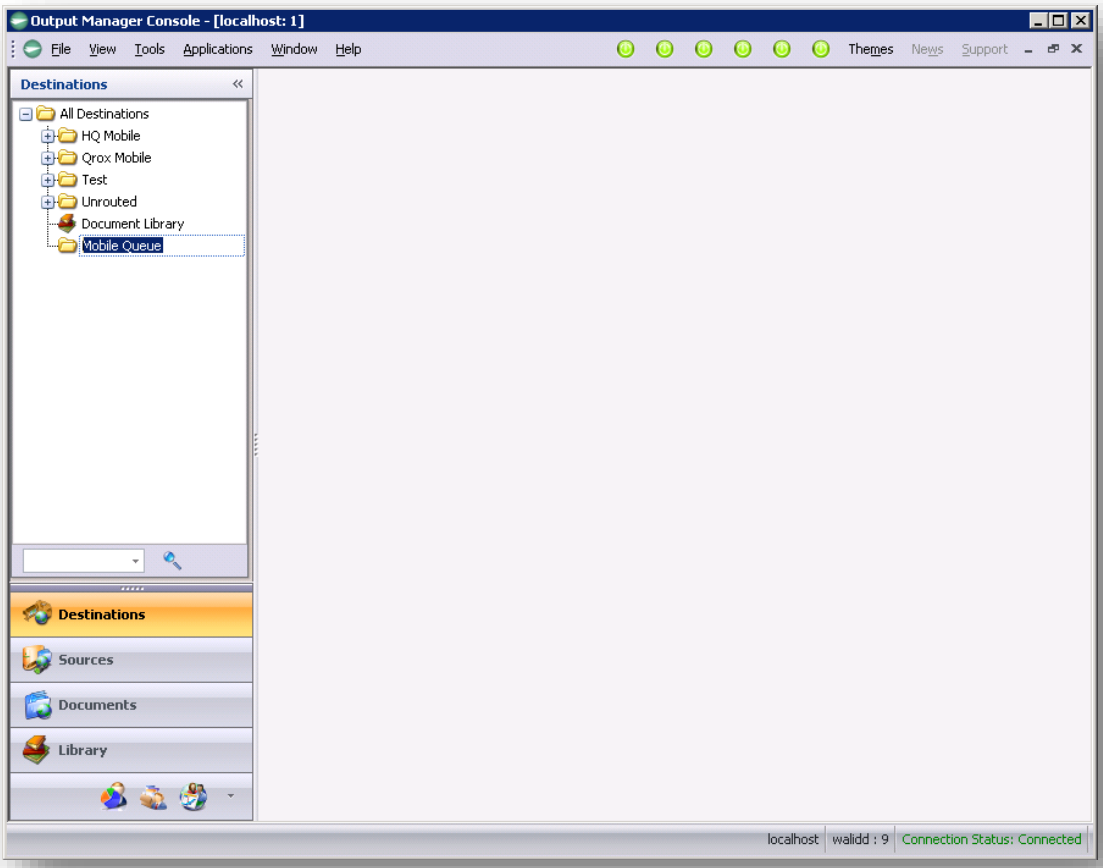
1. Click **Destinations**. This will open the Destinations view for Output Manager.



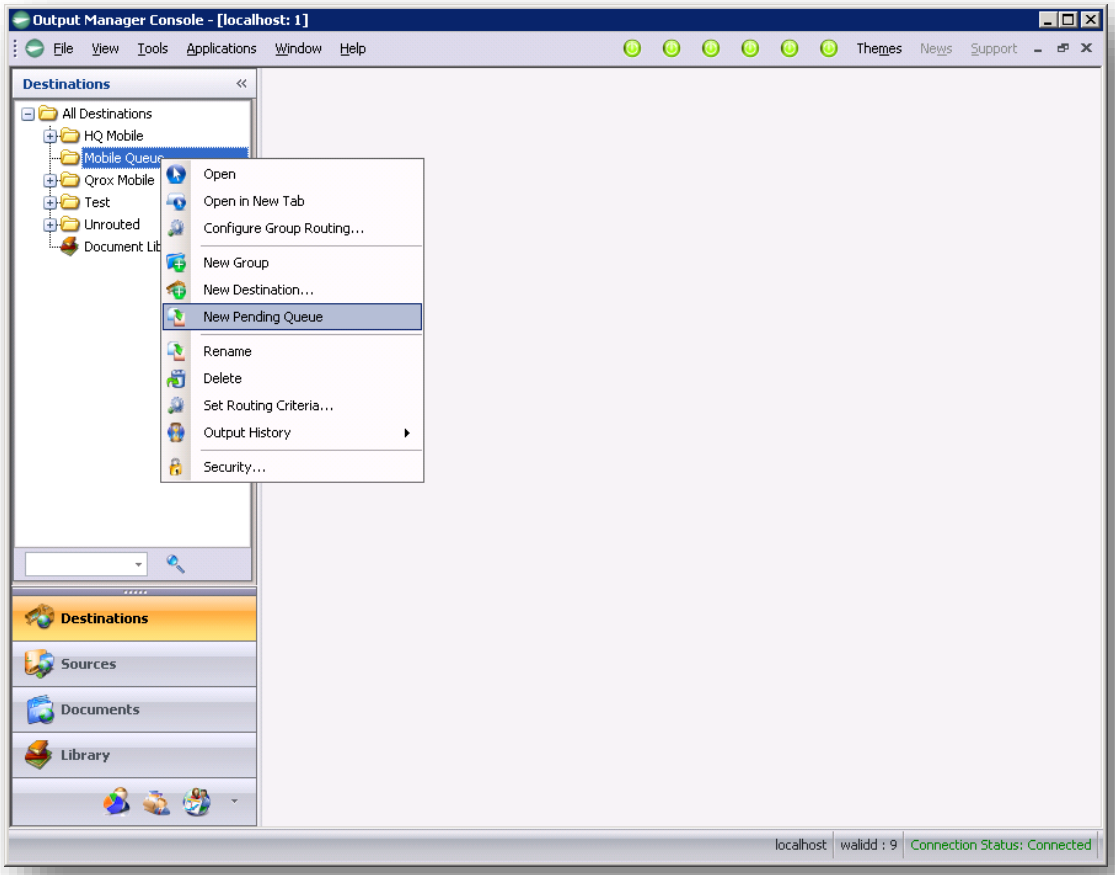
2. Right-click **All Destinations** and select **New Group**.



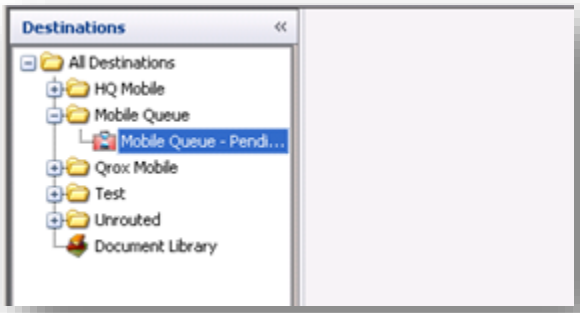
3. Enter “Mobile Queue”.



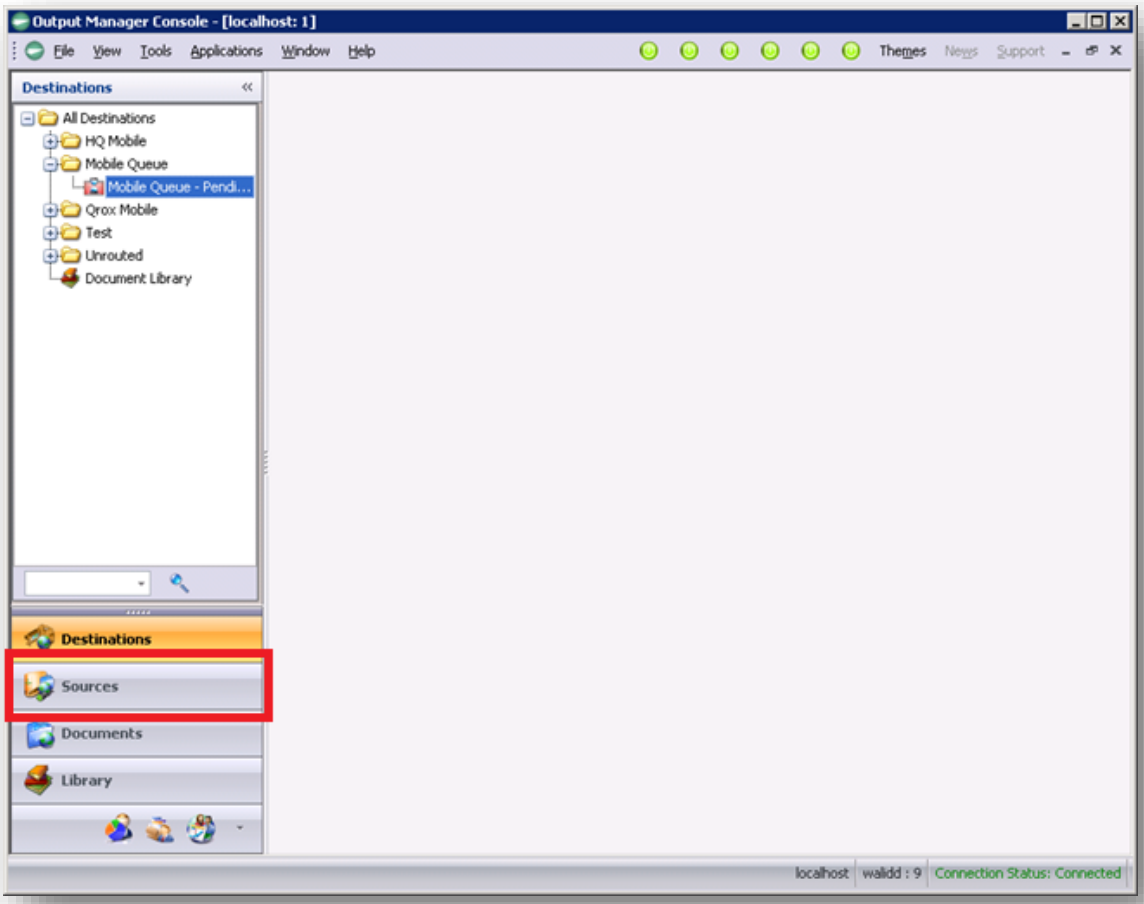
4. A pending queue must be added to the group that was created. Right-click the group **Mobile Queue** and select **New Pending Queue**.



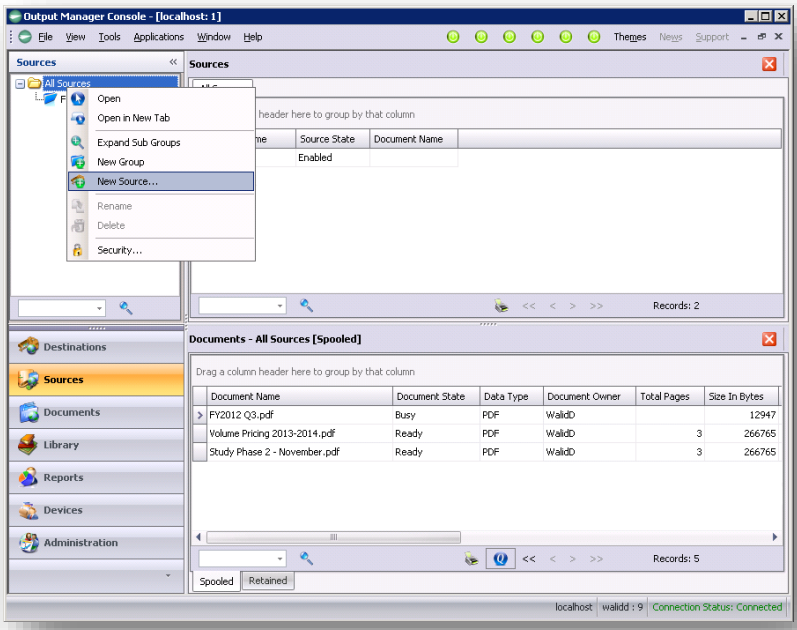
After adding the Pending Queue:



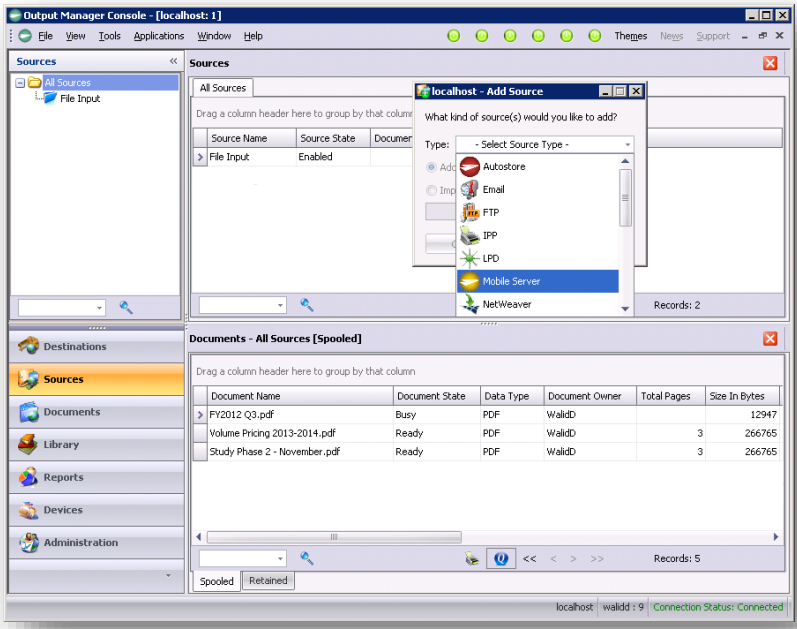
5. You must add the source Mobile Server. Click on **Sources**.



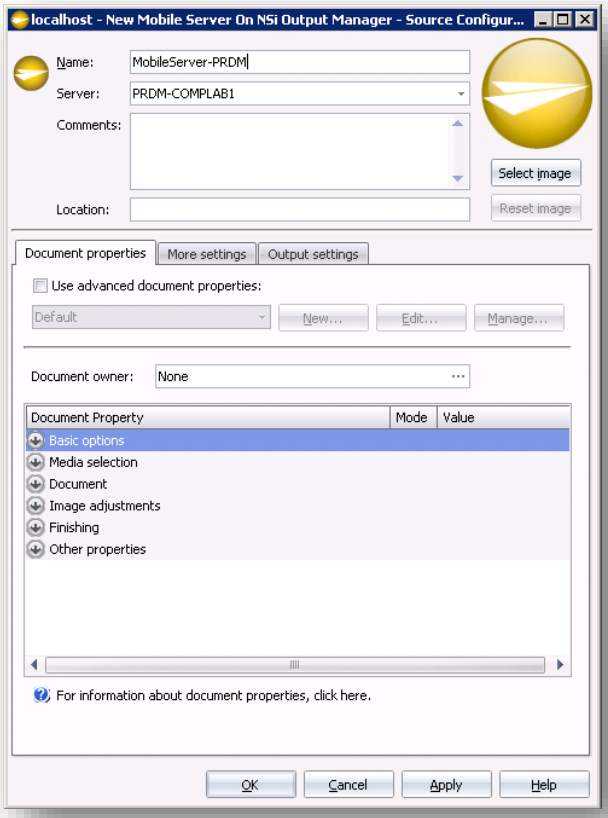
6. Right-click **All Sources** and select **New Sources**.



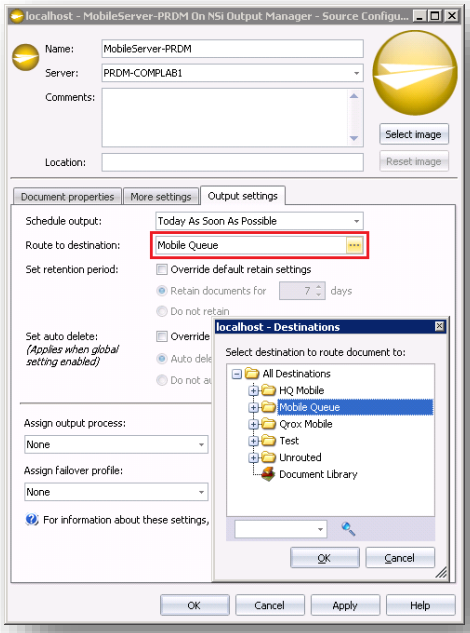
7. For **Source Type** select **Mobile Server**.



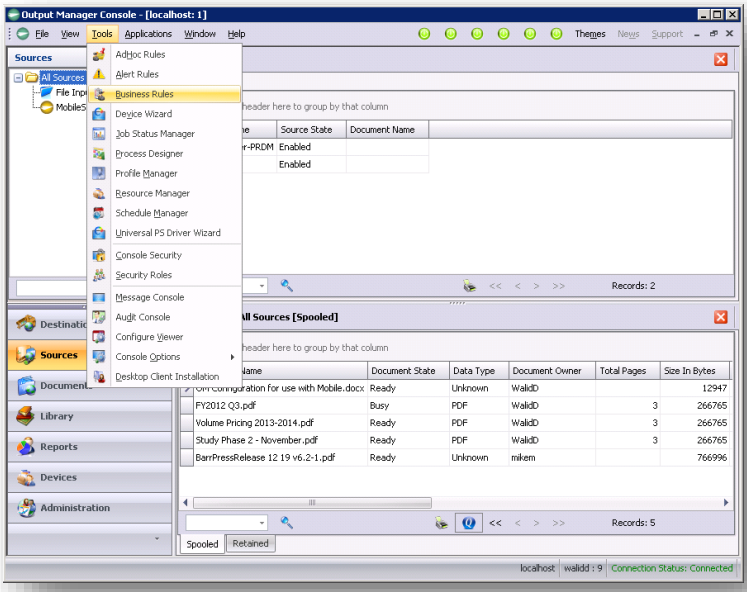
8. Enter the name for the source. Click on Output Settings.



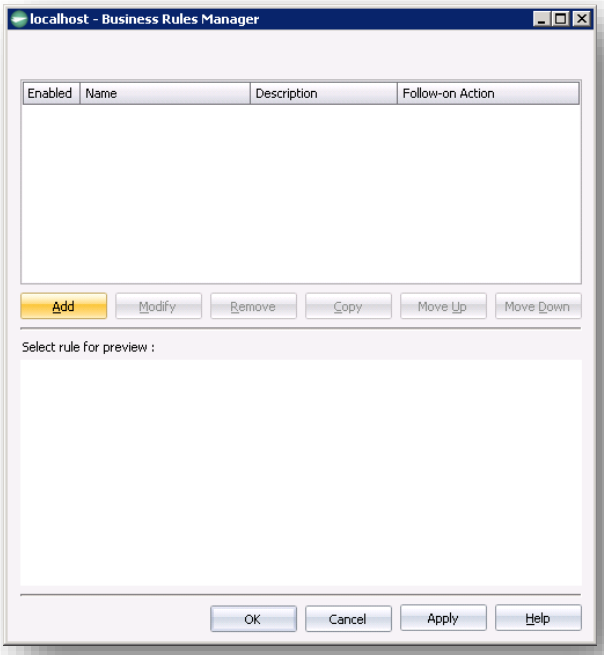
9. The source must point to the destination group's pending queue. This was the pending queue that was created in the **Mobile Queue** group. Click the **Output settings** tab. For **Route to destination** select the group **Mobile Queue** group. This is the group that was previously created. Click **OK** twice to save your settings.



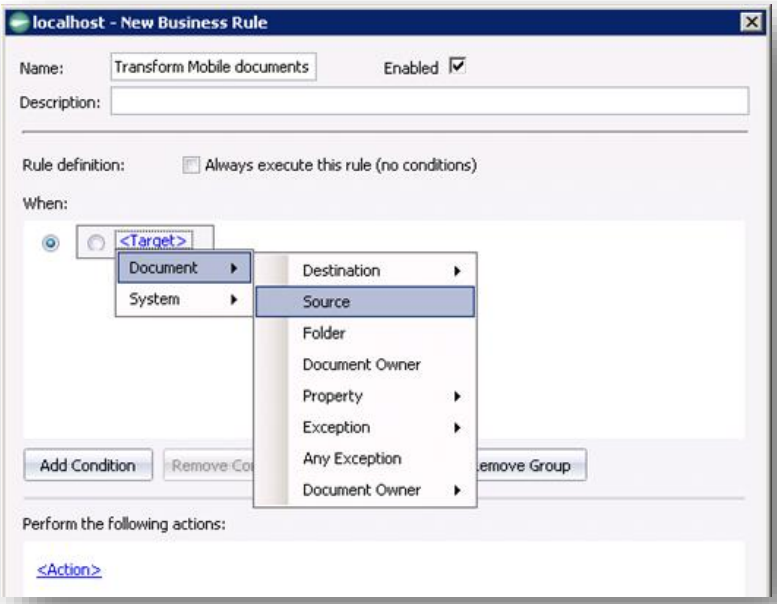
10. A business rule must be added. Click **Tools** and select **Business Rules**.



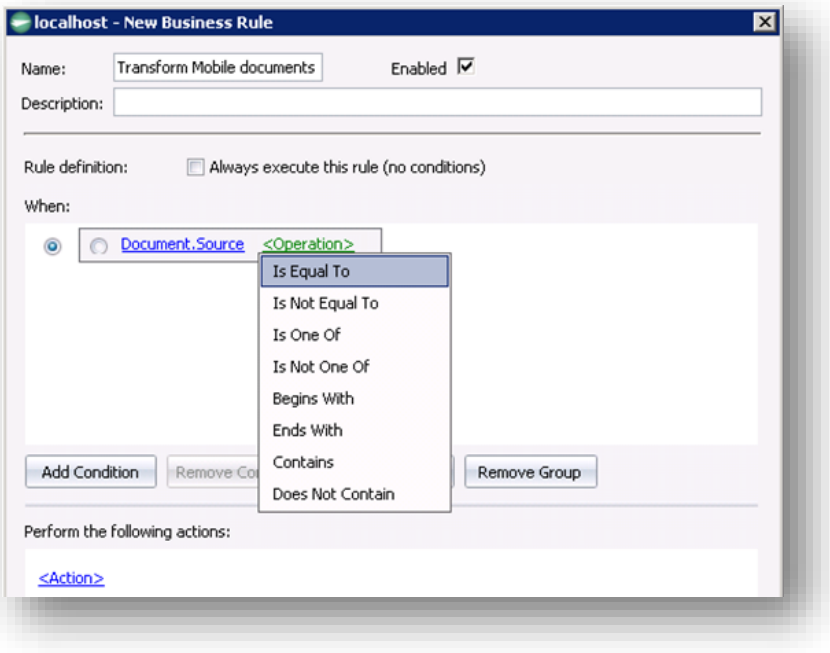
11. Click **Add**.



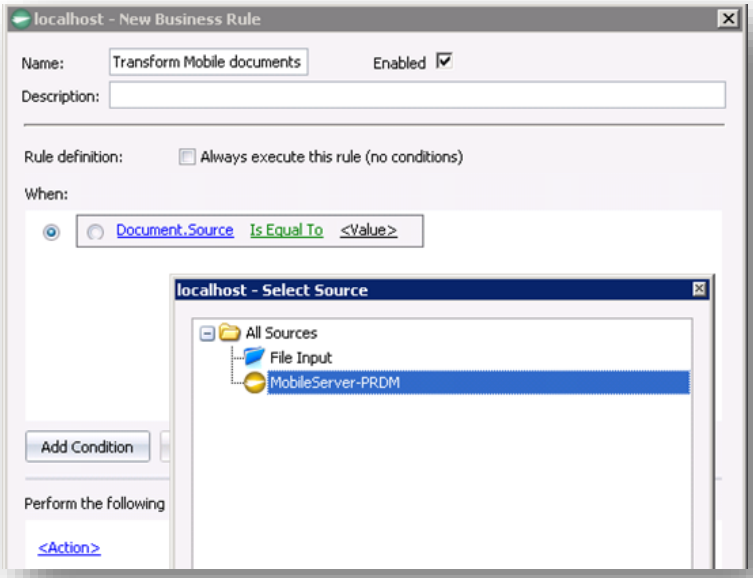
12. A business rule must be created specifically for the Mobile Server source only. Click **<Target>** and select **Document** and then select **Source**.



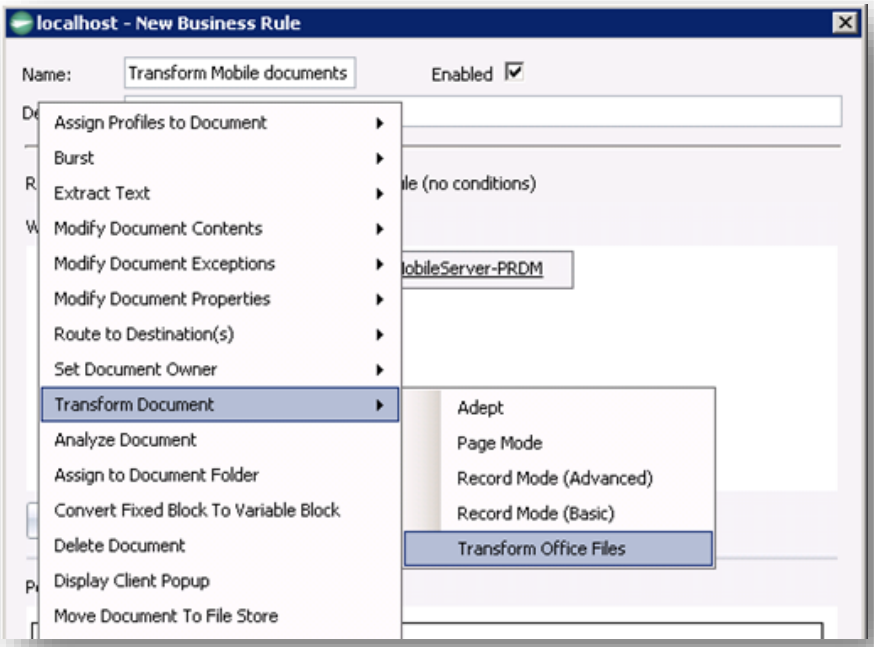
13. Click on **<Operation>** and select **Is Equal To**.



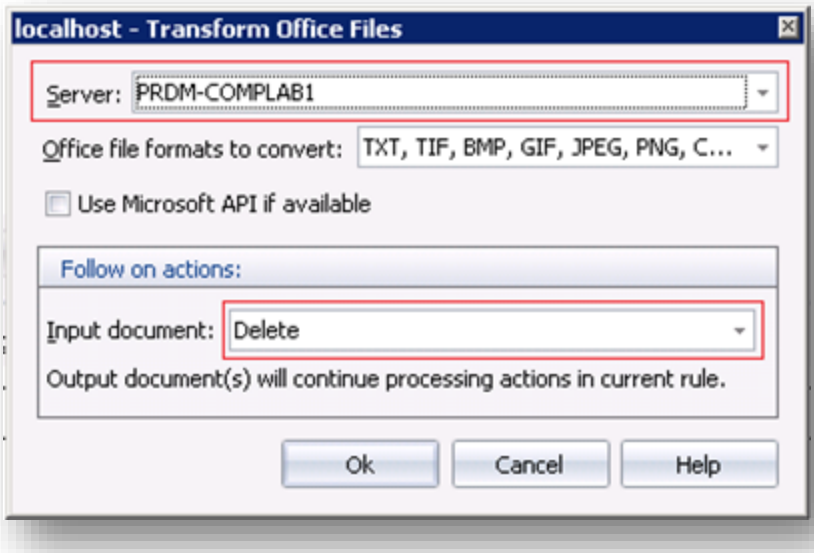
14. Click on **<Value>** and select the Mobile Server source that was previously created.



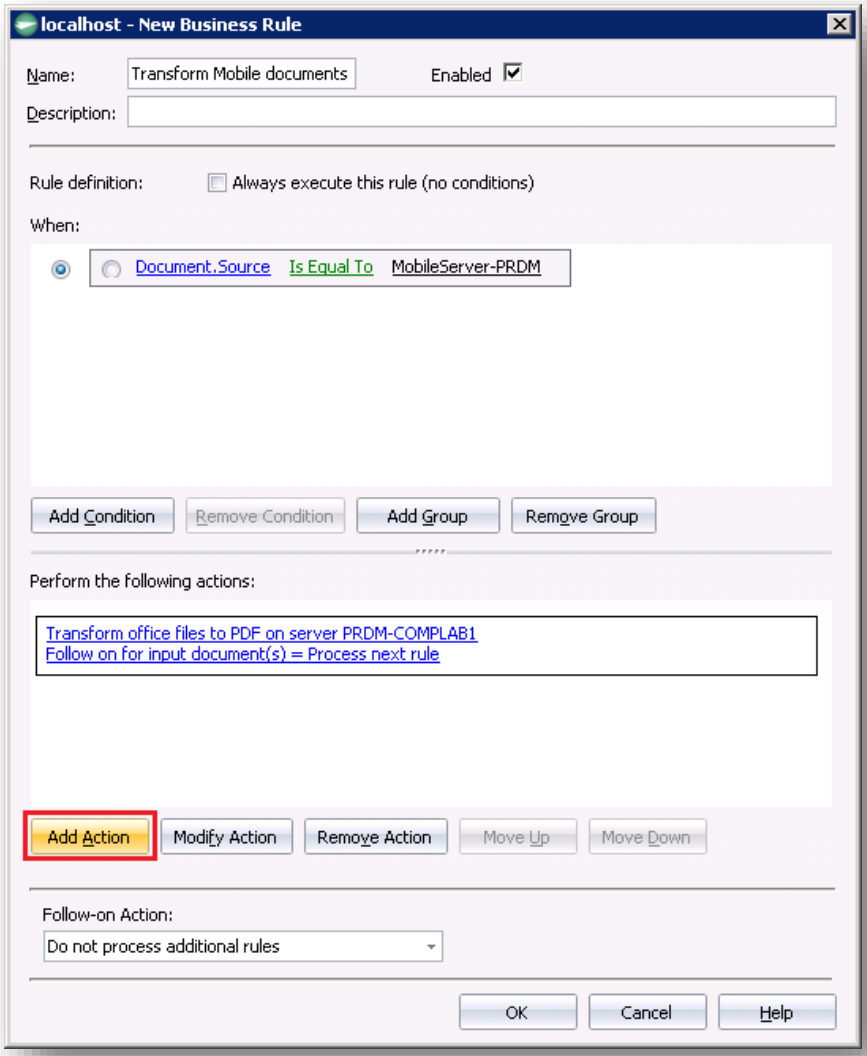
15. An action must be added for transformation. Click on **<Action>** and select **Transform Document** and then select **Transform Office Files**.



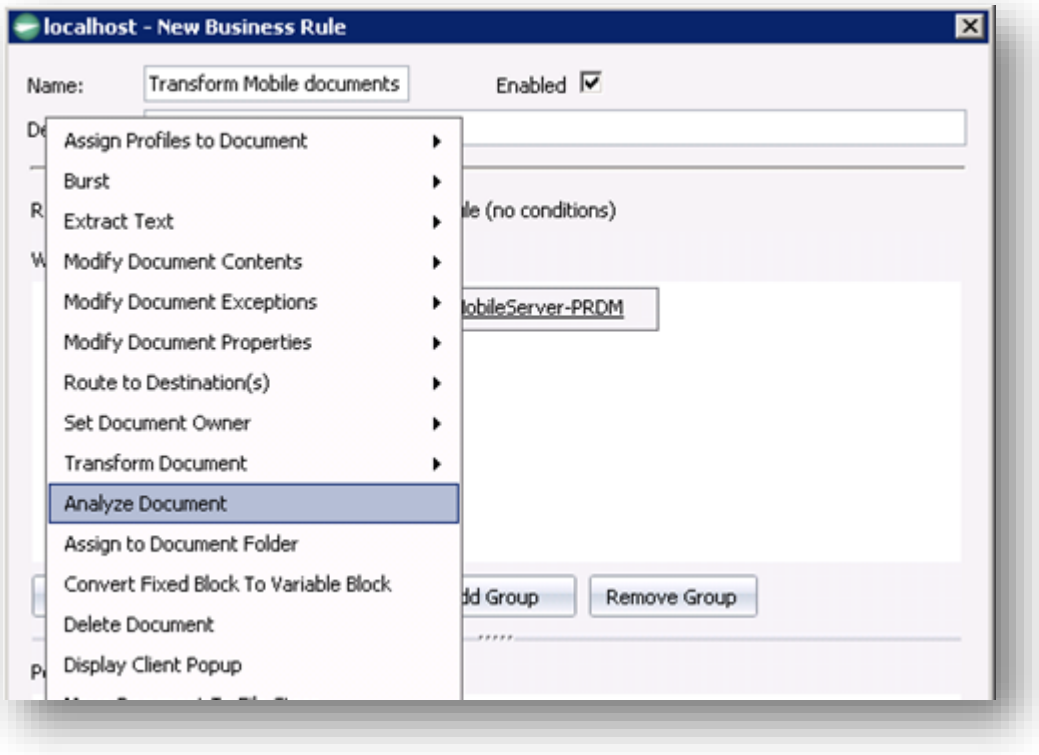
16. Enter the location of Output Manager for this Mobile Server source. For **Follow on Actions**, select **Delete** for **Input document**.



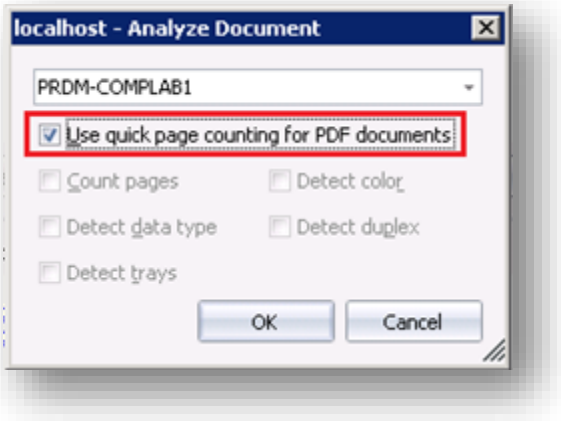
17. Add another action to analyze the document for quick page counting for PDF documents. Click **Add Action**.



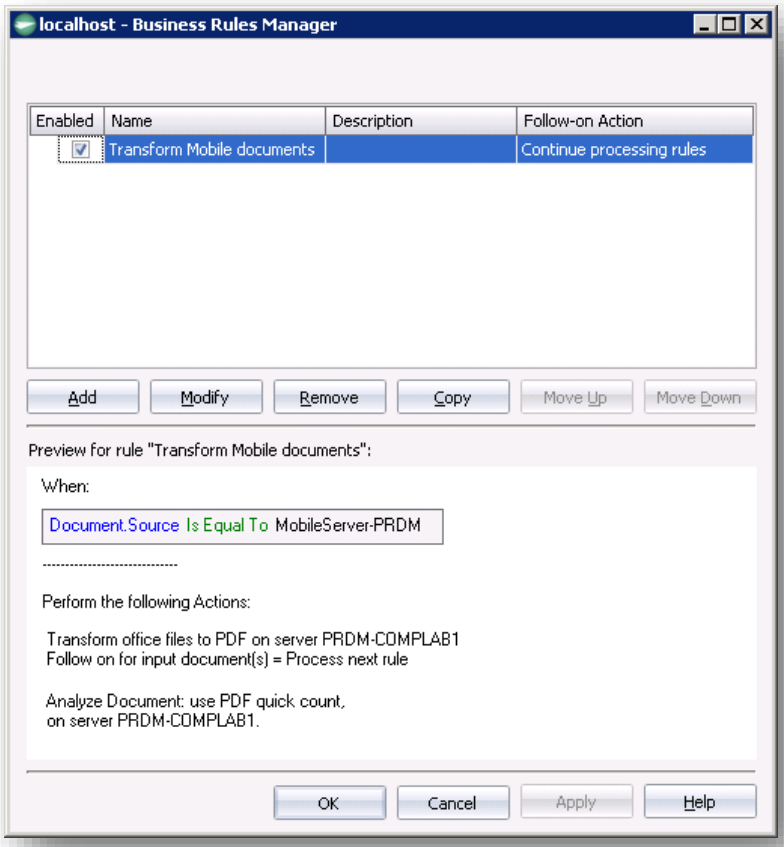
18. Click **<Action>** and select **Analyze Document**.



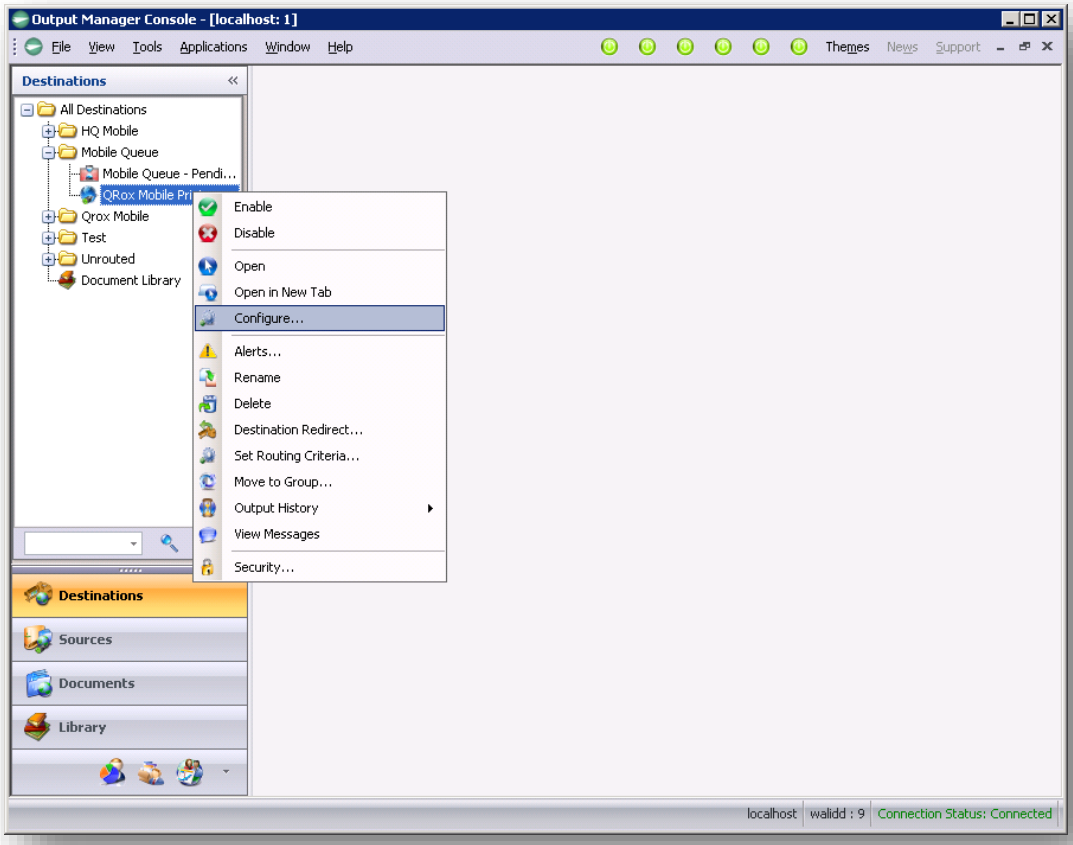
19. Enter the location of Output Manager for this Mobile Server source. Select **Use quick page counting for PDF documents**.



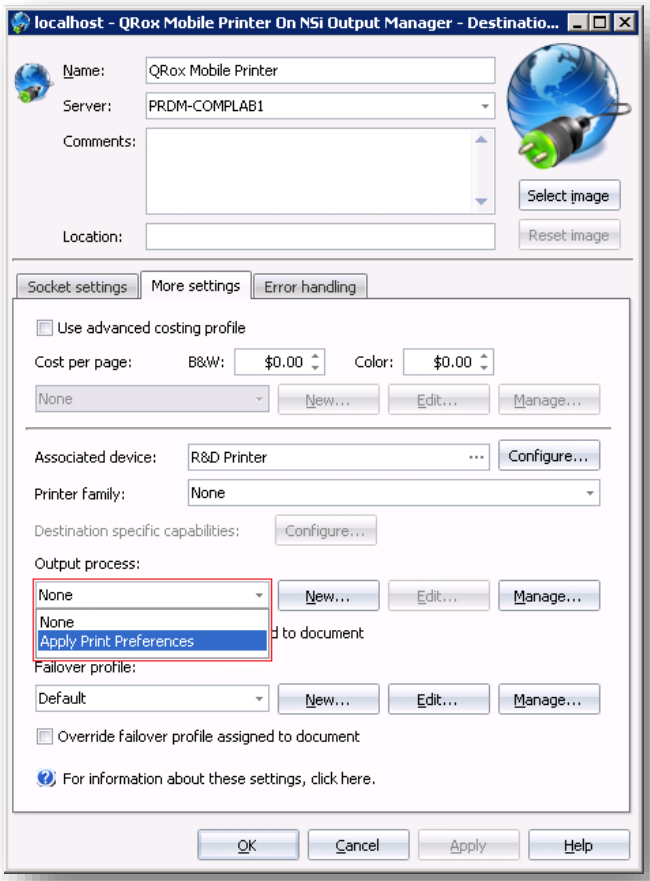
20. Click **OK** twice to save your settings. You will see a summary of the business rule you have created.



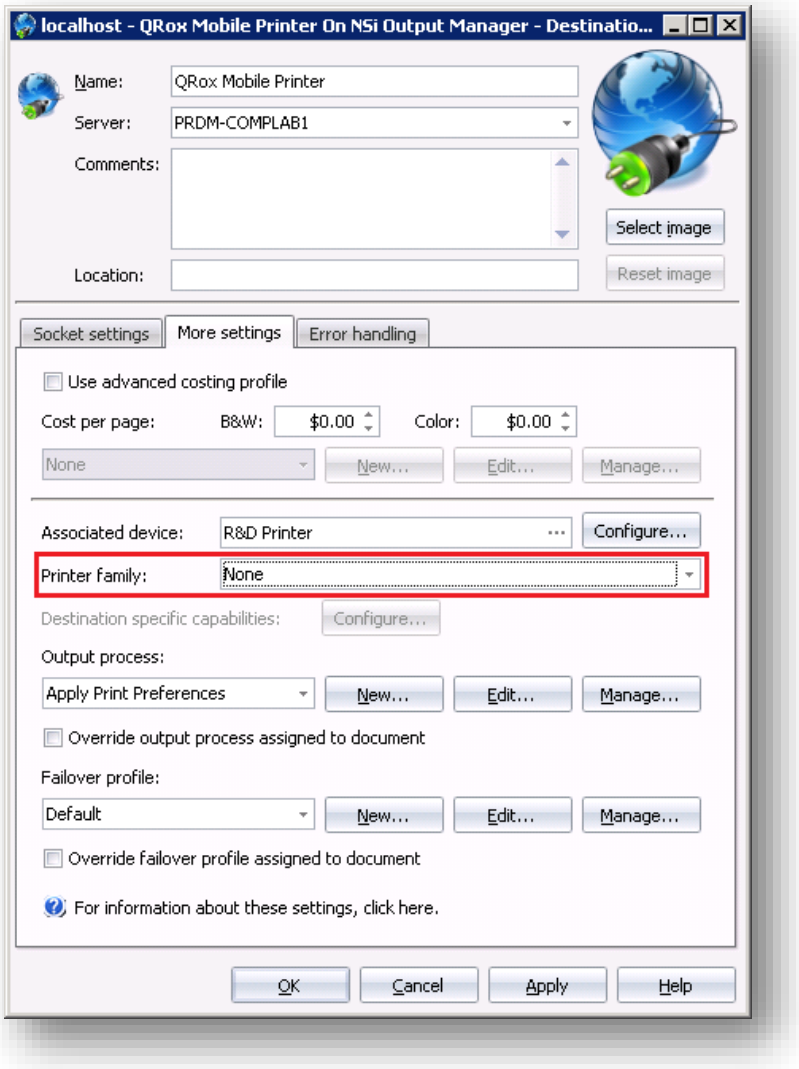
21. For each destination in the **Mobile Queue** group that was created, configure the **Output Process** settings. Right-click the destination and select **Configure**.



22. Select **More settings** tab. For **Output Process** select **Apply Print Preferences**.



23. Select the **Printer family** settings for each destination in the destination group.



Note the following:

- You can do a bulk configuration for destination settings.
- If device is found through SNMP, the **Printer family** should be populated. If it is not populated, make sure the destination printer family is defined. In the alternative, select the closest printer family within the manufacturer group.
