Chapter 1

About this release

The release notes give you information about Kofax iRemit 7.5.0. Please read this document carefully, as it may contain information not included in other product documentation.

Version information

The build number for Kofax iRemit 7.5.0 is 7.5.0.0.0.100.

Product documentation

By default, the Kofax iRemit documentation is available online at the following location.

https://docshield.kofax.com/Portal/Products/en_US/KofaxiRemit/7.5.0-47bo3w92dt/KofaxiRemit.htm

New features

This release provides the following new product features. For more detailed information on the features, see the Kofax iRemit documentation.

- Phase three of the Integrated Receivables solution has a multi-level workflow. ACH transactions can run through a validation engine. If they do not pass validation, they load into the workflow for manual remediation. The user can add stubs and edit data to create a more complete posting file for the ERP system. This workflow can be configured for multi-level approval. This is available as a subscription service.
- Users can search for a specific transaction within the workflow.
- Notifications have been updated to accommodate the workflow transactions.
- Dashboard widgets for workflow have been added to provide statistics.
- Group Administration has been updated to allow administrators to configure workflows.
- The self-service password enables users to change their own password without administrator assistance.

Chapter 2

Resolved issues

This chapter lists previously reported issues that are now resolved.

- **11120:** Notification emails were being duplicated.
- **11133:** Super Administrators had the ability to edit their own privileges.

Chapter 3

Known issues

This chapter contains information about potential issues that you could encounter while using Kofax iRemit 7.5.0. Workarounds are provided, as applicable.

New user not being asked for One-Time Password

11255: The one-time password multi-factor authentication option does not work for organization sub-groups. The option does work for the parent group.

Workaround: To work around the issue, use challenge/response multi-factor authentication for sub-groups.
