

# Installing and Configuring IIS

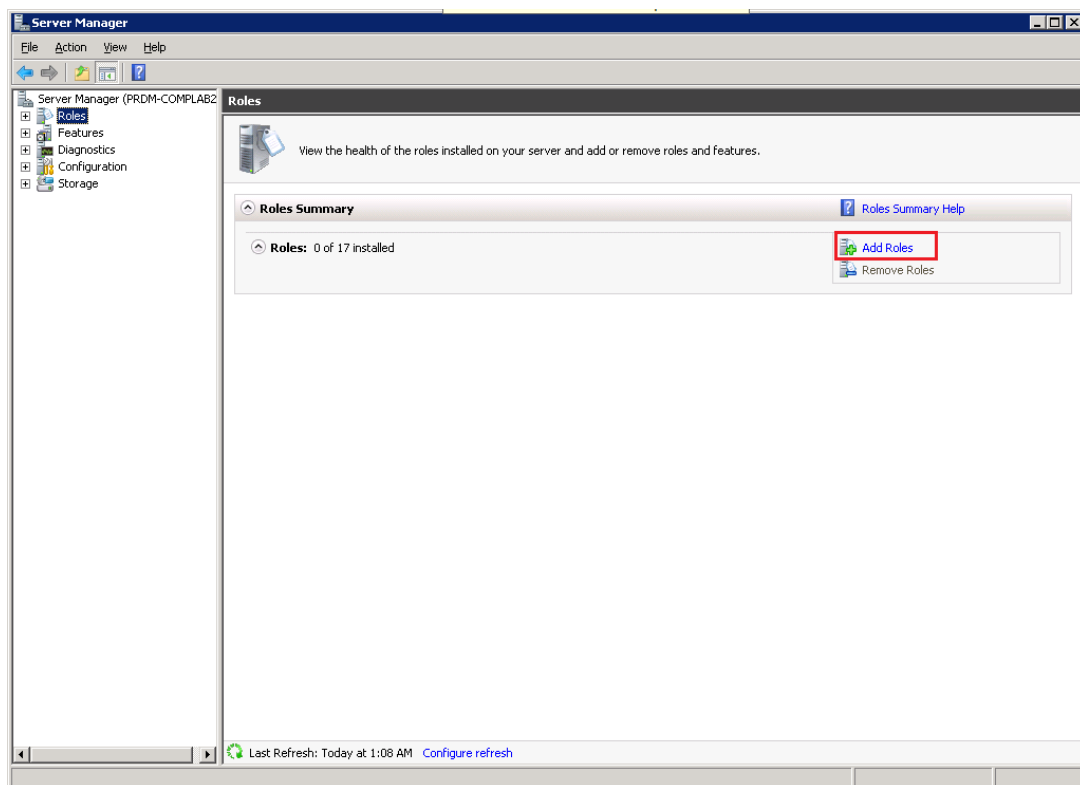

---

## Important Notes

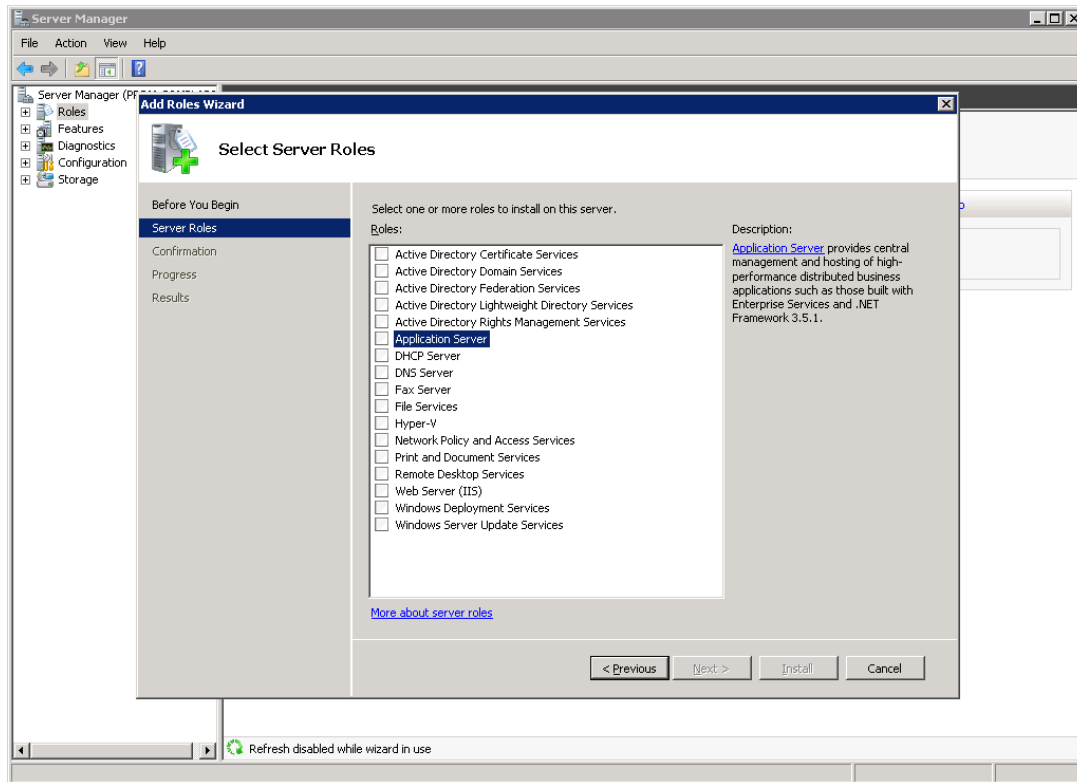

If .NET 4 is installed prior to installing and configuring IIS, it will have to be reinstalled/repared as a final step. Refer to the section on Reinstalling/Repairing .NET Framework 4.0. If it is not installed prior to installing IIS, simply run the latest .NET Framework 4.0 installer from Microsoft.

## Steps on the NSi Mobile Server

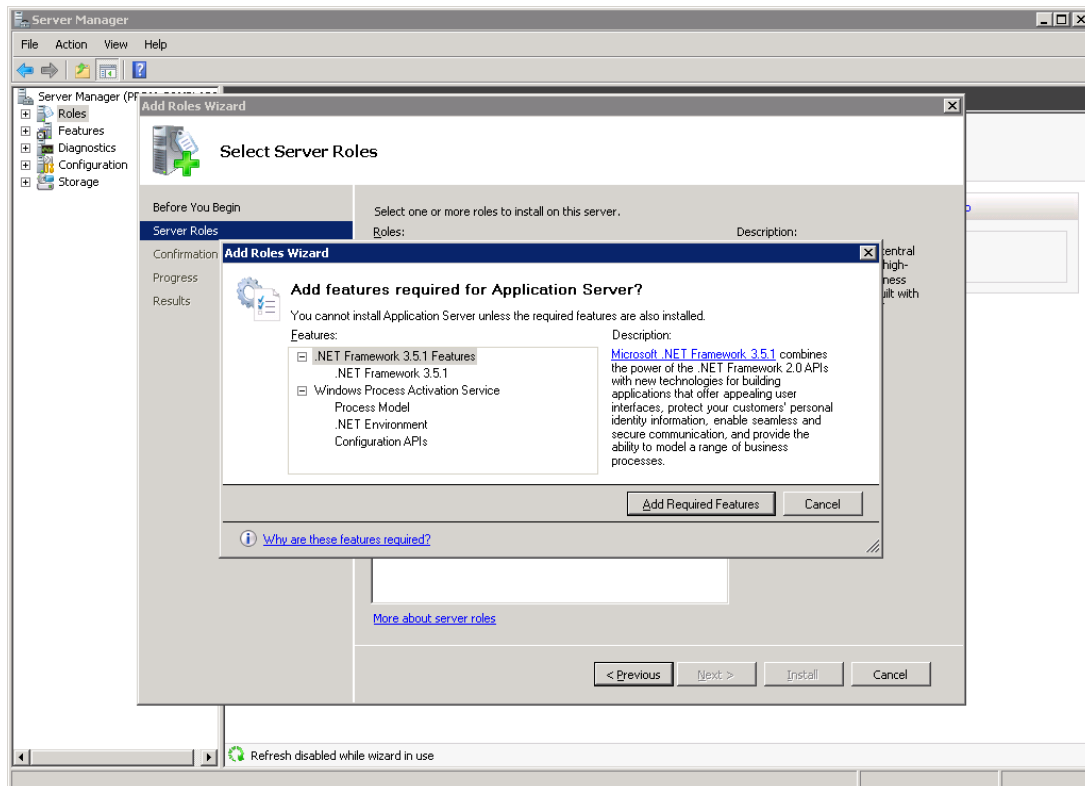

1. Launch the Server Manager, and select Roles.
2. Click **Add Roles**.

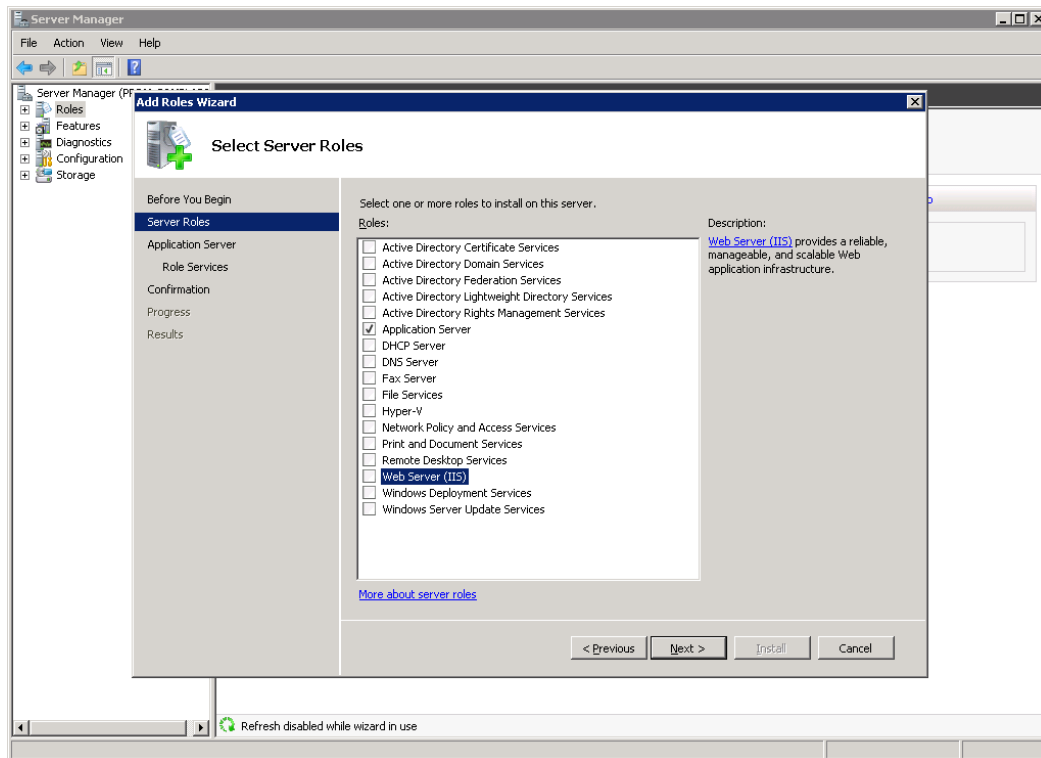

3. In the **Roles** list, select the check box for “Application Server”.

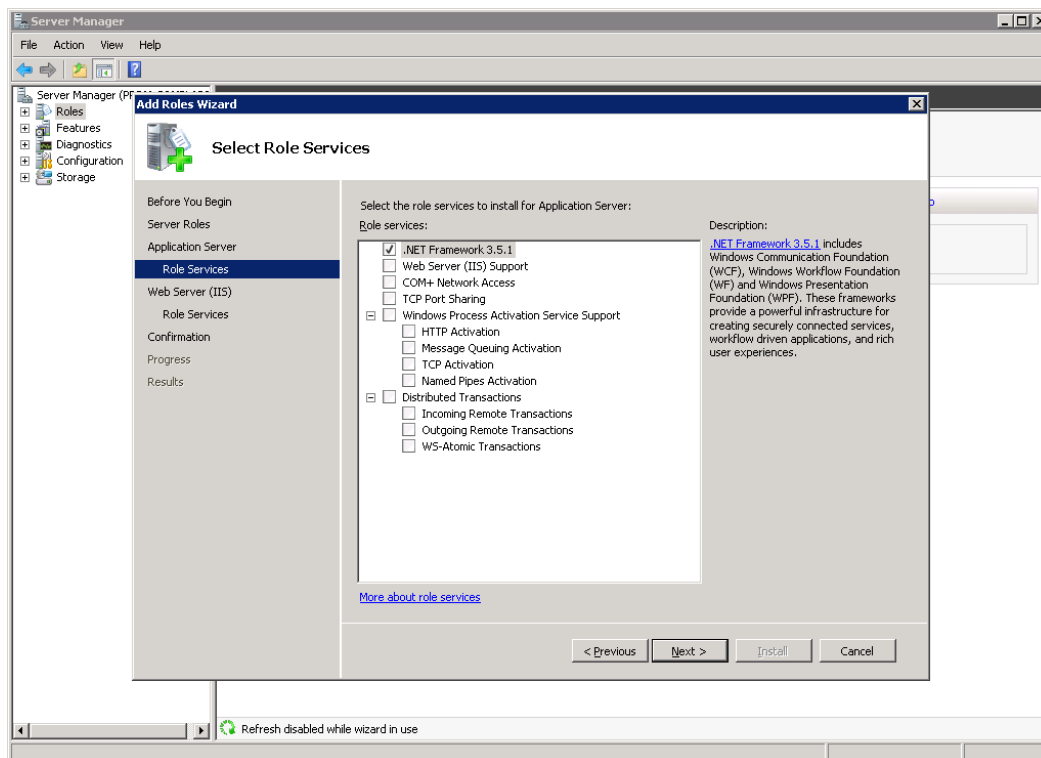

4. Click the **Add Required Features** button.

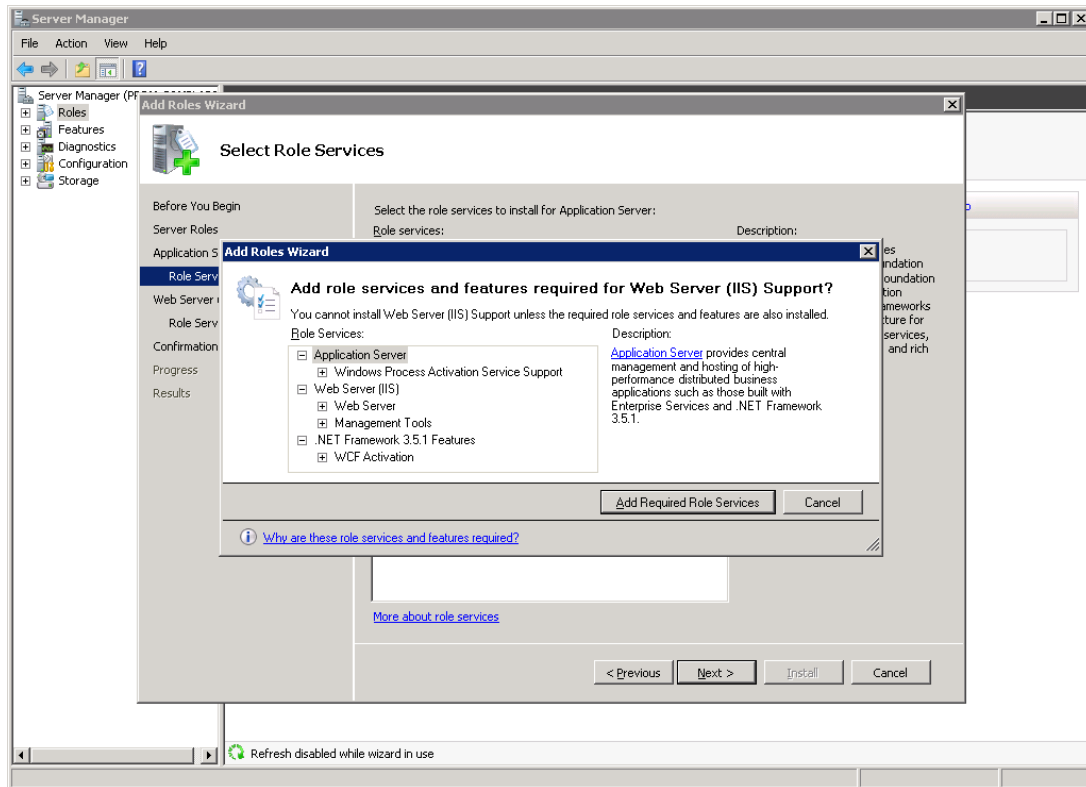

5. In the **Roles** box, select the check box for “Web Server (IIS)”.
6. Click the “Next” button

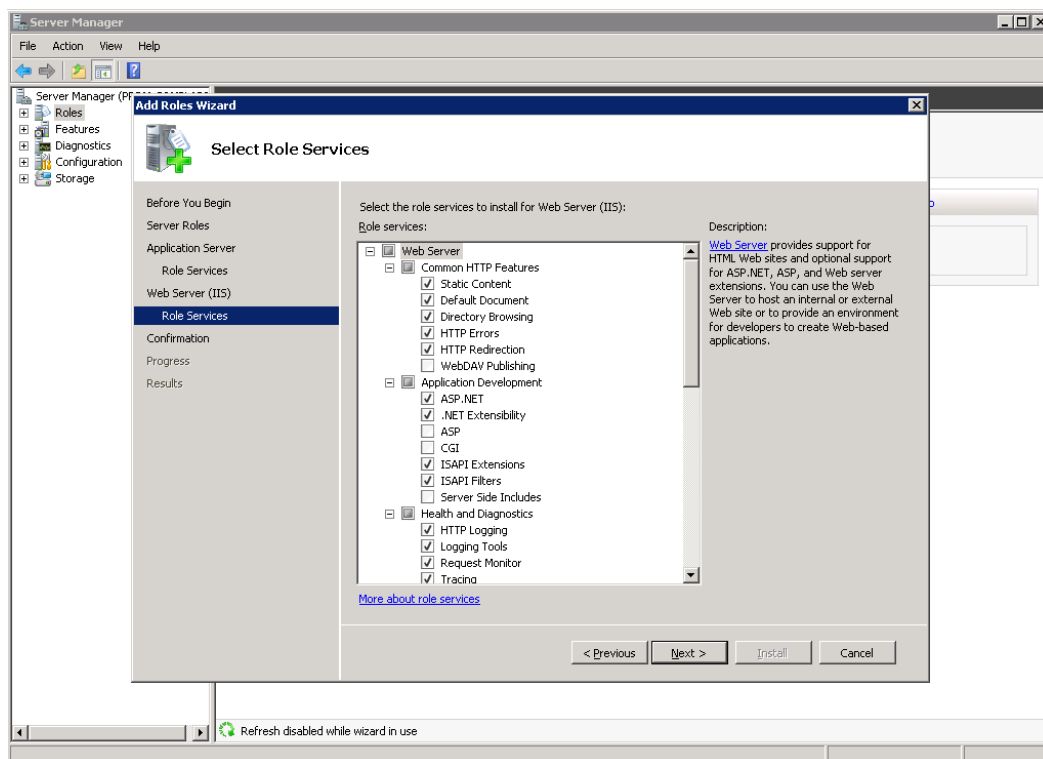

7. Select the check box for “Web Server (IIS) Support”.

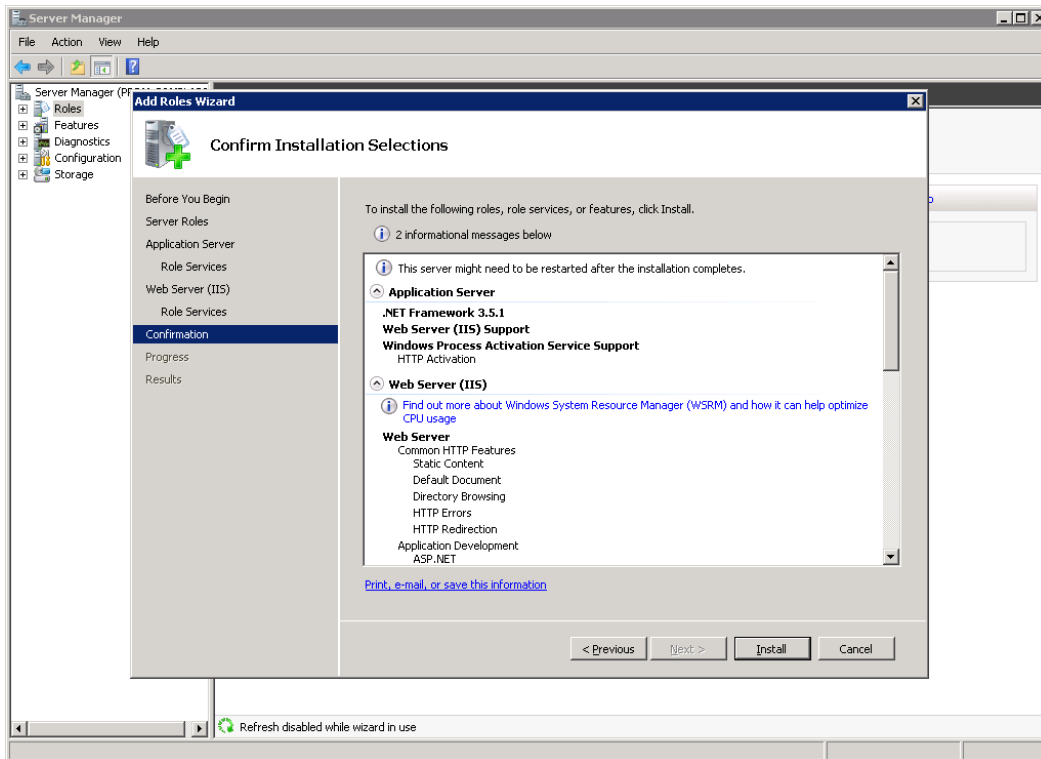

8. Click the **Add Required Role Services** button.

9. Click the **Next** button.

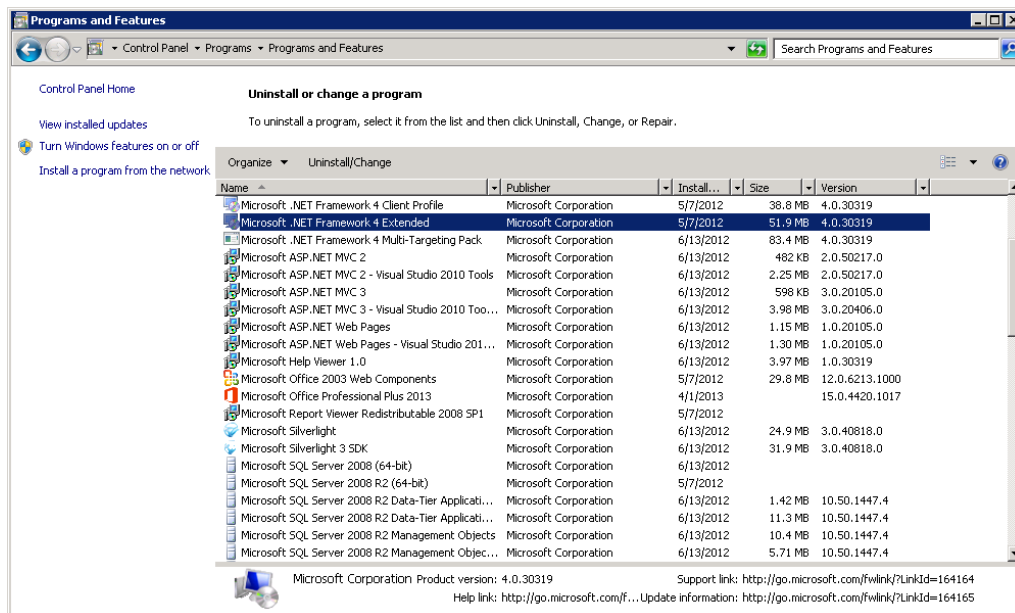

10. Click the **Install** button.

# Reinstalling .NET Framework 4.0

## Steps on the NSi Mobile Server

1. In Control Panel, open Add/Remove Programs.
2. Select “Microsoft .NET Framework 4 Extended”.
3. Click **Uninstall/Change**.

4. Choose the **Repair .NET Framework 4 Extended to its original state** option, and click **Next**.
