<b>Output Handler .....</b>	<b>5</b>

# Introduction

---

*Standard Components* refers to add-on integrations and customizations that are ordered separately and supported by the Consulting Services organization. These features are not part of the DOCUMENTS core product but can be ordered separately.

## Page Statistics

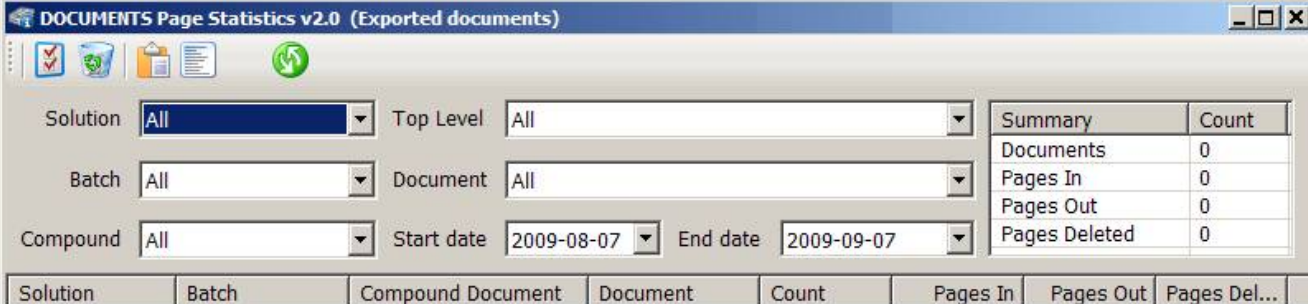

---

The Page Statistics component collects information about how many pages and documents reach the Output task. You can see how many pages are scanned, or imported and removed, but it only counts those that reach Output. Deleted batches or documents are not counted in the statistics.

Page statistics consist of:

- A database table created by an SQL script.
- One output add-on.
- One viewer installed as a separate executable.

The page statistics viewer shows statistics on the page level for all documents and sub-documents where the add-on is active. It is possible to view the statistics for a solution, batch, compound, and document between specified dates. It shows the number of documents, number of pages in, number of pages out, and the number of deleted pages.

Solution	Batch	Compound Document	Document	Count	Pages In	Pages Out	Pages Del...
All	All	All	All				

Summary	Count
Documents	0
Pages In	0
Pages Out	0
Pages Deleted	0

# Output Handler

Output Handler is an advanced output add-on for DOCUMENTS. One or more *profiles*, each with its own settings, can be assigned to document specifications, compound document specifications, and/or batch specifications.

The component handles XML generation/transformations and multi-page TIFF/PDF generation. It can create subfolders based on extracted data. It can also call plug-ins if necessary.
