Overview

These release notes contain information that is not included in product documentation and also give an overview of the enhancements and corrections in this release.

Licensing

You receive a license file in accordance with the agreements concluded with ReadSoft. You must load this license file before ReadSoft SCAN CLIENT can be used in production. For more information, see *XBOUND Installation Guide*.

Installation

Microsoft .NET Framework

SCAN CLIENT 5.9 requires Microsoft .NET Framework 4.5.

Installation

See *SCAN CLIENT Installation Guide* for detailed instructions. Silent installation is also described there.

Updating an existing installation

Due to complexity, it is important to precisely follow the instructions in *SCAN CLIENT Installation Guide* when upgrading an existing installation.

Third-party components

SCAN CLIENT uses the following software that is copyrighted by its respective owners.

Component	Version
Accusoft BarcodeXpress 9	9.0.1.7
Accusoft ImagXpress 12	12.0.1.35
Accusoft ScanFixXpress 7	7.0.0.48
IBM Data DB2	9.5.0.2
Infragistics 4	15.1.20151.2132
PixTools	8.5.0.1260
XBOUND Runtime	3.7.1.x or higher

SCAN CLIENT Release 5.9, March 2016

New features and enhancements

Using blank pages for document separation

Blank pages can now be used to signal a new document when automatically separating batches into sub-documents. This is configured during the scan process.

Blank page remover

SCAN CLIENT 5.9 contains the custom component Blank Page Remover.

It enables you to:

- Manually mark or unmark pages as blank.
- Manually or automatically delete blank pages.

Focus on moved page

When you reorganizing a batch by moving a page to another position, the moved page remains in focus.

Fixed defects

Batch reorganization

Resolved an issue where barcodes created by the scanner were not applied causing the reorganization of a batch to not work after an individual image was rescanned.

Scan profiles

Resolved an issue where importing a scan profile could lead to an error if it did not contain any settings for the scanner used.

Display

Resolved an issue where the focus was lost after changing the order of the pages.

Output

Resolved an issue where all expected media were not exported to the output folder.

Custom Component

Resolved an issue where sorting or deleting a batch could result in an error.

Resolved an issue where the custom component, XBOUND Exporter, did not verify if active batches were still in the export queue before closing the SCAN CLIENT.

Security-related changes

There were no security-related changes or bug fixes in this version of SCAN CLIENT.

File version

The file version of SCAN CLIENT Version 5.9 runtimes was changed to 5.9.x.
